2. Before start diagnosis, please make sure

The ignition switch is turned to ON position

Engine is off

10 to 14 volt vehicle power

Never try to provide power for the code reader from USB connection when the code reader is communicating with a vehicle.

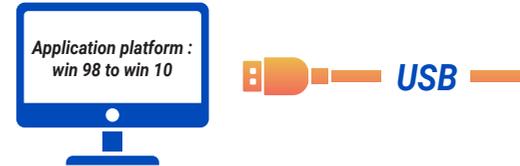

Don't connect or disconnect the equipments while the ignition is on or the engine is running.

3. Powering up the scanner

Before using the code reader, make sure to provide power to the code reader. The unit operates on any of the following sources:

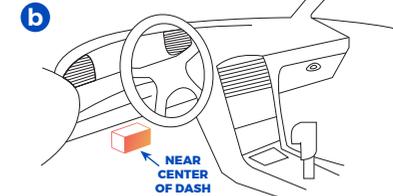

3.1. USB connection to computer

3.2. 12-volt vehicle power

Turn the ignition off.

Locate the data link connector (DLC) under the dash on the driver side of the vehicle.

Switch the ignition key to the ON position.

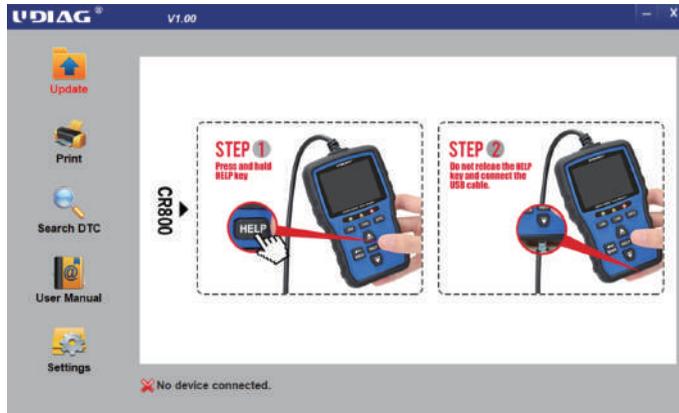

The code reader automatically boots up.
